Digital Literacy Project Report

- Name: SIDDHANT GHOSHAL
- Registration Number: 25BAI11128
- Branch: CSE-AIML
- Year: 1st Year (2025 batch)
- Course Code: CSE0001
- Course Title: Digital Literacy

Introduction

This project was assigned as part of the Digital Literacy course to help students understand the importance of using digital tools effectively and responsibly. As a Student Digital Ambassador, the goal was to create awareness among peers about digital platforms, communication, and online safety.

Through this project, I explored various tools such as Canva, GitHub, and Google Forms, and also learned how to maintain a professional online presence. Each task focused on a different aspect of digital literacy, including creating visual content, building a digital portfolio, understanding online platforms, practicing email etiquette, and learning about cybercrime.

Overall, this project helped me gain practical knowledge and improve my digital skills, which will be useful throughout my academic and professional journey.

Task-1

In Task 1, I created a digital literacy awareness infographic using Canva. The infographic was designed to present important concepts in a simple and visually appealing manner. It covered topics such as the meaning of digital literacy, useful digital tools for students, safe internet practices, professional online presence, and email etiquette.

While designing the infographic, I focused on keeping the layout clean and easy to understand. I used icons, headings, and bullet points to make the content more engaging. One interesting aspect was learning how to balance design and information so that the infographic does not look overcrowded.

Initially, I found it slightly challenging to choose the right layout and color combination, but with practice, I was able to create a professional-looking design. This task helped me understand how visual communication can be used effectively to spread awareness.

Task-2

In Task 2, I created my student digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose. GitHub is used for sharing and managing projects, LinkedIn is used for professional networking, and Kaggle is useful for learning and practicing data-related skills.

On GitHub, I created a profile README that includes my basic details and learning goals. On LinkedIn, I added my educational information and created a simple professional profile. On Kaggle, I set up my account to explore learning opportunities in data science.

This task helped me understand the importance of maintaining a professional online presence from an early stage. Over the next four years, I plan to regularly update my profiles, add projects, and connect with people in my field. This will help me build a strong digital identity and improve my career opportunities.

Task-3

In Task 3, I explored coding and collaboration platforms. I created an account on a coding platform and completed a beginner-level problem, which helped me understand how such platforms are used for practice and skill development.

Additionally, I created a Google Form as a Digital Literacy Awareness Quiz. The form included five questions related to digital safety and awareness. I also linked the form to a Google Sheet to collect responses.

This task was useful in understanding how online tools can be used for both learning and collaboration. The coding platform helps in improving problem-solving skills, while Google Forms can be used for surveys, quizzes, and data collection.

Overall, this task gave me practical experience with tools that are commonly used in academics and real-world scenarios.

Task-4

In Task 4, I learned about professional communication through email writing and social media usage. I wrote two formal emails—one requesting an assignment extension and another expressing interest in an internship opportunity. This helped me understand the importance of proper structure, polite tone, and clarity in communication.

I also created a checklist of do's and don'ts for social media usage. This highlighted how important it is to behave responsibly online and maintain a positive digital image.

A situation where poor communication can cause problems is when a student sends an email without a subject or uses informal language. This can create a negative impression. Using proper email etiquette can help avoid such issues and ensure effective communication.

Task-5

In Task 5, I researched cybercrime, specifically UPI payment fraud. I learned how easily people can be tricked into sending money through fake requests or links. One thing that surprised me was how common these scams are and how quickly they can happen.

This task made me more aware of the importance of being cautious while making online transactions. I realized that many people fall victim simply because they are not aware of basic safety practices.

As a result, one habit I will change is always verifying payment requests before approving them. I will also avoid clicking on unknown links and ensure that my personal and financial information remains secure.

Conclusion

This project was a valuable learning experience that helped me understand different aspects of digital literacy. From creating visual content to building a professional portfolio and learning about cyber safety, each task contributed to improving my digital skills.

It also made me more aware of responsible online behavior and the importance of maintaining a professional presence. The knowledge gained from this project will be helpful not only in academics but also in future career opportunities.

Overall, this project has increased my confidence in using digital tools effectively and responsibly.
